EDUCATION

Rutgers University,
New Brunswick, NJ
2013 – 2017
B.S. in Computer Science

SKILLS

Frontend

HTML and CSS
JavaScript and React
Webpack bundling
3D graphics with Three.js

Backend

Node.js with Express
MongoDB via Mongoose

Software

Git alongside GitHub
Adobe Photoshop
Adobe Illustrator
Substance Painter
Blender

Language

Spanish (Fluent)

Interests

Film Photography
Car Repair (Toyota MR2)
Drawing

WORK EXPERIENCE

Front End Developer

OtterTune, Pittsburgh, PA
March 2022 – April 2023

- Collaborated on a site wide rebuild of the user interface concluding in an official v1.0 release of the application.
- Deliberated on the front-end technologies that should be used moving forward while rebuilding the site.
- Helped conduct interviews, decide on new hires, and onboard new employees to the team.

Full Stack Developer

Laika Gallery, New Brunswick, NJ
August 2018 – February 2022, May 2023 – Present

- Developed a responsive cross-platform web application that allows clients to create interactive art galleries.
- Designed an interface that allows for seamless editing of images, forms, and 3D spaces rendered using Three.js.
- Implemented a REST API to handle MongoDB documents online.

Oculus VR Developer

Open Society Foundations, New York City, NY
January 2020 – January 2021

- Led the development of a VR application with Unity and their XR plugin framework to push the limits of interactive storytelling.
- Optimized memory management to support 360 videos and large-scale 3D scenes within Quest's limited hardware.

UX/UI Engineering Intern

Authorea, Brooklyn, NY
August 2016 – December 2016

- Improved the platform's user experience, user interactions, and interfaces as guided by the lead designer.
- Increased sign-up referrals by 600% through component renovations.
- Helped migrate existing front-end interfaces to React.

Software Engineer

Game Research and Immersive Design, Piscataway, NJ
June 2015 – August 2016, June 2017 – August 2018

- Followed through on creating an interactive LED grid that used microcontrollers, Websockets, and a Raspberry Pi to operate.
- Worked alongside Mozilla's IoT team on integrating our custom hardware to their Web of Things project.
